

compare on the same rows, dose and endpoint

- concept write $W_{q,q}$
- five competing clinical directions $\max_{d \neq q} W_{q,d}$
- 119 random directions 95th percentile
- coordinate-permutation sham lshaml

owned: $O_q = W_{q,q} - \max_{d \neq q} W_{q,d} > 0$ (simultaneous max- T bounds), $W_{q,q} > \text{random p95 and lshaml}$
